

# Lithium iron phosphate battery for sale

Lithium iron phosphate battery for sale

Yes, this battery has low temperature protection and high temperature protection. When the temp is below 23° or over 140°, the battery will stop being charged to protect its lifespan. When the temp is below 5° or over 158°, it will stop discharging.

2. All battery interconnect cables should be the same wire gauge (AWG) and length, and come from the same brand. Otherwise, the impedance will be inconsistent, resulting in unbalanced charge and discharge performance.

To store your battery, keep it at least 30%-50% charged. We recommend that you charge the battery every 6 months when not in use to prevent overdischarge. When storing the battery for 1-3 months, you can place it in an environment with a temperature range of -4°~113°/-20°~45°; when storing it for 1 year, it is recommended to place it in an environment with a temperature range of -4°~68°/-20°~20°.
