

Litime 12v 100ah mini lifepo4 lithium battery

Litime 12v 100ah mini lifepo4 lithium battery

Please take time to carefully review the manual prior to setup and operation to ensure proper use and long-lasting performance from your LiTime system. We're here to support you throughout the warranty periods.

The battery can be fully charged in one day (with effective sunshine 4.5 hrs/day) by 400W solar panels. It may take more than one day to fully charge the battery by $\geq 400W$ solar panels since the duration and intensity of light would be a great factor for their charging efficiency.

If the alternator or generator supports DC output, a DC-to-DC charger is needed to connect the battery to the generator; if your alternator or generator supports AC output, please add a suitable battery charger to connect the battery and the generator according to our recommendations.

LiTime 12V 100Ah mini LiFePO₄ batteries can safely charge between 0°C to 50°C / 32°F to 122°F. Please note that the 12V 100Ah mini version does not include low-temperature charging protection function.

It is recommended to store LiTime LiFePO₄ batteries at 50% state of charge (SOC). If the batteries are stored for long periods, recharge the batteries at least every 3 months. Recommended storage environment: 10°C~35°C (50°F~95°F), 45%RH~75%RH

I bought 2 of these compact power babies! great power for my water cooker (100A) but I emptied them twice by mistake since I don't have a controller / monitor that fits with the battery. My suggestion is that these are offered together with the pack. Further, I trust no damage because of this action.

I purchased the LiTime 12v 100ah Mini batteries for my FWC Grandby to replace the existing AGM batteries. It's amazing how much lighter the LiTime Mini batteries are, the conversion was easy, and the fit & finish on the LiTime Minis is great. Once I fabricate some shields for the batteries, I will be able to use the extra room for storage. I definitely recommend LiTime Mini batteries as a replacement.
