Amber Kinetics, a US-based energy storage company, announced plans to further expand its operations in the Philippines and the US following a visit by Philippine Ambassador to the US Jose Manuel Romualdez.

"Amber Kinetics' investment and innovation in energy storage are transforming the Philippines' energy landscape, driving sustainability and supporting our transition to a greener future," Romualdez said during a visit organized by the Philippine Trade and Investment Center (PTIC) in Silicon Valley.

Romualdez took note of a new technology unique to Amber Kinetics--an energy storage extending capacity from minutes to hours. The new technology offers safe, sustainable, and reliable solutions for modern energy grids.

"This bilateral partnership exemplifies our shared vision for world-leading energy efficiency solutions. We are excited about the next stages of development," said Amber Kinetics co-founder and chief technology officer Seth Sanders.

The visit was an off-shoot of Amber Kinetics' participation in the Philippines Sustainability Roundtable during the 2023 Asia-Pacific Economic Cooperation in San Francisco, where the company was recognized for its contributions to renewable energy initiatives in the Philippines.

Amber Kinetics has a global facility in Batangas, which focuses on manufacturing, assembling, and testing flywheels, and a demonstration hub at De La Salle University in Sta. Rosa, Laguna which is the world's first flywheel innovation center.

If you wish to use the map services of Google Maps, personal data will inevitably be transmitted to Google. Google is a service provider in a third country with a level of data protection that is not equivalent to that of the EU. Your data may also be used by Google for its own purposes. Google is able to identify you as a natural person based on your IP address, your Google account (if available and logged in) and other criteria. You can find out more about the data processing carried out by Google [HERE](#).

The Department of Energy (DOE) said Thursday adding battery energy storage systems in the renewable energy technologies to be offered under the Green Energy Auction Program 4 could bring up the offer prices by P5 to P6 per kilowatt-hour.

"We know that adding the energy storage system is going to increase the price. It can go for as high as an additional about P5 to P6 kWh," Energy Undersecretary Rowena Guevara said at the sidelines of the European Chamber of Commerce of the Philippines' Energy Smart Forum 2024.

Guevara said they were looking at options on how to bring down the prices for BESS. "We're still talking with our simulators, then we will hold public consultations because it should be feasible for the generators," she said.

Guevara said one strategy is to use transition credits for those who have coal facilities. "That transition credits will take up a little bit of the price of the plant that they will build in renewable, so the price will go down," she said.

Radio Veritas Asia (RVA), a media platform of the Catholic Church, aims to share Christ. RVA started in 1969 as a continental Catholic radio station to serve Asian countries in their respective local language, thus earning the tag "the Voice of Asian Christianity." Responding to the emerging context, RVA embraced media platforms to connect with the global Asian audience via its 21 language websites and various social media platforms.
