We are thrilled to announce a groundbreaking joint venture between Store Energy California and NeoVolta, a leading provider of advanced energy storage solutions. This partnership is set to revolutionize energy access for low-income households across California by leveraging state-funded incentive programs to install state-of-the-art battery storage systems at no cost to the families.

The collaboration between Store Energy California and NeoVolta is driven by a shared vision of enhancing energy security and resilience for vulnerable communities. NeoVolta will supply its cutting-edge Lithium Iron Phosphate (LiFe) batteries, known for their longevity and safety. Store Energy California will connect homeowners with approved installers and manage the entire process of applying for and utilizing state-funded incentive programs.

This initiative aims to reach approximately 1.3 million low-income homeowners in California, defined as those earning between 50% to 80% of the Area Median Income (AMI) for their region. These families may qualify for various state assistance programs designed to support low-income households and ensure they have access to reliable energy solutions.

NeoVolta CEO Ardes Johnson expressed his enthusiasm for the partnership, stating, "By partnering with Store Energy California, we are making it easier for low-income families to benefit from these programs, ensuring they have reliable and continuous power. As a California-based manufacturer, we are proud to support our local communities with our high-quality, safe, and durable battery storage solutions."

In 2023, every customer of Southern California Edison Electric Company experienced at least one power outage. This partnership directly addresses such issues by providing reliable power solutions that keep families safe and connected during outages. NeoVolta's batteries are engineered to deliver uninterrupted power, providing peace of mind to homeowners.

Ryan Green, CEO of Store Energy California, highlighted the mission behind the partnership, saying, "Our mission is to help Californians stay powered on and safe through state-funded incentive programs. By working with NeoVolta, we are ensuring that more families can stay powered and safe, particularly those in low-income households. This partnership exemplifies Californians supporting Californians, and we are excited to help bring these benefits to our communities."

This initiative began in June 2024 and will continue as long as the state-funded incentive programs are available. To find out if you qualify for this program or to get more information, [click here](#).

NeoVolta designs, develops, and manufactures advanced energy storage systems for residential and industrial use. Their storage solutions, utilizing Lithium-Iron Phosphate (LiFe(PO₄)) battery chemistry, are clean,

nontoxic, and nonflammable. The NeoVolta NV14, their residential-focused product, features a solar rechargeable 14.4 kWh battery system, a 7,680-Watt inverter, and a web-based energy management system with 24/7 monitoring. With a 6,000-cycle battery life, the NV14 provides up to 16.5 years of useful life, offering one of the longest-lasting solutions on the market.

We are excited about this partnership and the positive impact it will have on low-income households across California. Together, we are taking significant steps towards a more sustainable and resilient future.

Sungevity is a leading residential solar power company in California. They offer customized solar energy systems with battery storage options, providing savings and financing solutions. Their solar systems are designed to adapt to customers' changing needs and come with a guarantee of performance for 25 years. Sungevity also offers a solar lease program where they own, install, and maintain the solar system. With an easy-to-use monitoring app, customers can track their solar energy system in real-time.

SMA America is a company that provides solar inverters and battery inverters for residential, commercial, and utility-scale projects. They offer a comprehensive suite of services to support the success of their customers.

Caban Systems is a company that offers intelligent energy storage solutions. Their Continuo Platform is a cloud-based asset management system that allows for real-time remote monitoring of energy systems. They provide turnkey energy service solutions for a variety of applications, including off-grid and on-grid power sources. Caban Systems' lithium-ion technology offers high-density batteries with a 10-year life expectancy. They have active operations in multiple countries, including the US, Mexico, and South America.
