## Most efficient solar panels 2024

Solar panels help the environment, offering a smart way to generate electricity around the house. But despite their clean energy reputation, different solar panel models perform differently, varying in what the industry calls efficiency rates. We'll take you through the most efficient solar panel models, so you can get more power and save on electricity bills.

Several well-known manufacturers are exploring new ways to produce more efficient panels, including ones that perform well under intense heat. Here are the most efficient solar panels for your house in 2024.

Boasting maximum efficiency ratings as high as 24%, the AIKO N-Type ABC White Hole solar panel has broken records for energy efficiency levels. The panel surpasses the 20% efficiency many companies offered a few years ago, making it among the most efficient panels in the consumer market.

If you own a flat or have a smaller roof, AIKO's N-Type ABC Black Hole is another top energy-efficient option at a smaller size of 54 cells. The panels showcase a maximum efficiency level of 23.6% and have a 460W maximum output.

Not only is the panel smaller than its cousin, the ABC White Hole panel, but it's also significantly lighter, weighing nearly 17 pounds less. This is ideal if your roof is older, as the average three-bedroom house will need 10 panels.

Built with the same N-type technology as the ABC White Hole Series, the solar panel offers a 30-year performance warranty of 88.85% for increased longevity. Like many modern solar panels, the N-Type ABC Black Hole panel has a darker and sleeker look. For smaller households looking for a premium energy-saving solar panel, the 54-cell ABC Black Hole model may be a good choice.

SunPower is another leading company in solar panel efficiency popular with consumers thanks to its extended product warranties. SunPower owner Maxeon offers a 40-year warranty on its panels. That's pretty impressive for a company that says it has manufactured over 30 million panels so far.

The SunPower Maxeon 6 AC offers a 22.8% efficiency level, which may not be the top of the range, but still sits comfortably above the industry's average rates. The company also says its Maxeon panels can save up to 35% more energy over 25 years than when using conventional solar panels.

Another selling point of the Maxeon 6 AC panel is its performance warranty. The company promises its panels will generate 92% of their original output after 25 years of use, making them potentially some of the most durable panels on the market. Overall, the Maxeon 6 AC is a good energy-saving option.

## Most efficient solar panels 2024

Produced by one of the largest solar panel manufacturers in the world, the Canadian Solar HiHero panel is another worthy energy-saving solution. The panel features efficiency levels of up to 22.8%, matching the SunPower Maxeon 6 AC.

The HiHero panel from Canadian Solar is built to withstand the harshest of conditions, whether you encounter heavy snow or strong winds. Canadian Solar said its internal tests found its panels can survive heavy snow and wind.

The panel also has a low-temperature coefficient of -0.26%. The measurement determines how much power is lost when solar panels are subject to intense heat. In this example, the HiHero will become 0.26% less efficient for every one-degree increase past 25 degrees Celsius.
