

Most high powered air rifle

Most high powered air rifle

These days Air rifles are considerably more powerful than what most of us grew up with. They have also evolved from the round BB's to pellets that come in a wide range of calibers. In fact, there is little that modern-day air rifles have in common with the old school Red Rider.

That's what we really wanted to know, and we figured we weren't the only ones. So, we put together this review of the powerful air rifle reviews. We'll help you sort through the multitude of options, so you can spend more time doing what you love. By which we mean shooting holes in things...

After all, these powerful air rifles are as good for hunting as they are for target practice. Some of them are even powerful enough to cause serious injury, making them ideal for defending your home. No matter your intentions, this list is sure to have options to make any shooter want to hit that buy button.

When it comes to power, there are few air rifles that can compare with the Mod 135 Vortex QE. It's made by Hatsan, and it was a first when it hit the market, and is still relevant today. We like this for anyone looking to go air rifle hunting.

That's what you'll get if you purchase this model, but that's not even the best selling point. This model throws the pellets downrange thanks to the Vortex gas piston. We like the smooth action that this provides, as well as the longevity associated with gas over spring-action pistons.

We also love the look of this air rifle. It's definitely something that you'll want to take hunting or leave on show on the mantle thanks to the Turkish walnut stock. The Monte Carlo comb provides comfort when sighting in your prey, thanks to its adjustability.

One of our favorite aspects of this air rifle is the QuietEnergy barrel. This helps keep the noise down, which your neighbors will surely appreciate when you're shooting targets outback. There is also a rubber recoil pad with SAS (Shock Absorber System), which you will surely appreciate.

We also like the Quattro Trigger. This is a two-stage adjustable arch trigger that you can adjust for both trigger-pull weight, and length of travel. If all of that wasn't enough, there are also front and rear fiber optic sights.

In addition to the power, this air gun has Whisper Fusion Sound Suppression technology built-in. This helps keep your ears from ringing, so you'll be able to fire round after round. Which is something you'll certainly want to do thanks to the ten shot magazine.

The Swarm Magnum features a gas-piston power plant, better known as IGT Mach1 (Inert Gas Technology).

Most high powered air rifle

This provides consistent performance no matter what weather you're shooting in. An all-weather ambidextrous stock also helps on those bad weather mornings.

Other fantastic features that come standard on this air gun include a Recoil Reducing Rail. We love this feature as it helps to maximize the lifespan of your scope, with 99.9% recoil compensation. This is especially good as this model comes with a 3-9x40 scope.

Long ago, Sig Sauer earned its reputation as a top-quality firearm manufacturer. So, it's no surprise that they've created something marvelous with their first foray into the break barrel air rifle market. The ASP20 is one of the best power air rifles for younger shooters.
