

Netherlands power outages

Power outages in Netherlands can happen for a variety of reasons, from routine maintenance to unexpected emergencies. Our goal is to provide timely updates to keep you informed about any changes.

Scheduled maintenance is essential for improving the reliability and safety of the power grid. These outages are planned in advance, and we'll notify you so you can be prepared. However, emergencies, such as severe weather or damage to power lines, can lead to unexpected outages.

People living in at least 19 different postcode districts and 41 streets are affected and grid company Liander said it would be 11.45 am at least before normal service is resumed. "An engineer is on the way", Liander said on its website.

We've heard all about the Schiphol disasters, and know the ins and outs of the housing crisis -- so now, it's time to learn about the Netherlands' latest trend. Coming in 2023, to a neighbourhood near you: power cuts.

Therefore, writes Het Parool, Alliander may temporarily be unable to help customers directly if the grid in their district fills up. You know what that means: Time to stock up on candles! ?

At the moment, power cuts because of a shortage of electricity are extremely rare but that is set to change, Tennet said. The current maximum is four hours per year but from 2030 shortages may lead to a loss of power of 4.5 hours a year and that could go up to 12 hours in a worst case scenario.

The reason for the looming crisis is two-fold, Tennet said. On the one hand, demand for electricity is increasing as people switch away from fossil fuels. On the other, less electricity is being generated from sources which can be adapted quickly when demand increases - such as coal and gas.

"The aim to achieve the climate goals, with reduced dependency on fossil fuels, will only be realistic with strong European cooperation," COO Maarten Abbenhuis said. "This raises new challenges that will require more and more attention in the coming years."
