Next solar eclipse 2019 in ghana

The incredibly rare Super Blood Moon eclipse peaked early this morning (Monday, January 21) around 5.13am GMT (UTC). Skywatchers in North America had a particularly good view of the eclipse, but observers in the UK, parts of Europe and Africa also had a chance to witness totality. The total eclipse came just five months after the longest Blood Moon of the century on July 27, 2018. The Blood Moon was also preceded two weeks ago by a partial eclipse of the Sun on January 6.
