

# Nickel metal hydride batteries

## Nickel metal hydride batteries

We understand that awarding the production of a new custom lithium battery is a highly complex project for OEM customers, with a number of elements that need to be managed for your business. We bring trust, transparency and energy to each new relationship from the very first discussion. We help you to establish a fully-developed proposal and plan that takes you and every stakeholder in your team step-by-step from kick-off to mass production.

Our proposals are created to deliver detailed, carefully considered feedback to you and your team, allowing you to understand all aspects of the custom battery pack itself and the deliverables ABT will provide for you. We begin with the end in mind, addressing the Scope of Work, timeline, delivery milestones and any other services which will allow your entire team to make an informed decision. Our prep work is the foundation to a quick and smooth project.

We are proud of every project we are awarded. Our team, headed by a dedicated project manager, develops your custom battery pack design from concept through to manufacturing. Working collaboratively with your team, we work through DFMEA, drawings, PFMEA, PPAP submissions, sampling, tooling, battery certifications and approvals, testing, supply chain and manufacturing ramp-up.

Our robust manufacturing operations provide you with reliable and repeatable battery products. We deliver on-time and provide the flexibility of component and finished goods stock holding where required.

Alexander Battery Technologies" is a UK battery pack manufacturer, based in North East England. We also have offices in Frankfurt, Germany to support our customers in DACH (Germany, Austria, Switzerland). We serve customers around the world, including USA, Africa and Europe.

We pride ourselves on a rapid process of New Product Introduction and this begins before you even commit to award your new project to us. Our battery projects vary greatly in complexity from just one cell to large packs with high voltages using hundreds of cells and multiple Battery Management Systems. We work with you to ensure tight deadlines are well prepared for and met, but in general we will be in full production within 9 months on average.

The process of mass manufacturing custom battery packs is extremely complex. Lithium battery production is an extremely specialised topic that takes years of investment in resources and experience to get right. At ABT we have a proven track record of delivering complex battery projects to industry leading OEMs.

Partnering with ABT gives you access to expertise, cost-effective solutions, quality assurance, scalability, and regulatory compliance, ultimately enhancing the success and efficiency of your battery project.
