

Octopus energy best tariff

Octopus energy best tariff

Pop in your postcode to get a full list of our available and historical tariffs, and a price breakdown of each. Want to switch to Octopus? Or if you're an existing customer and you want to switch tariffs, go to change my tariff on your online account dashboard.

Explore our full range of smart tariffs. Picking the right tariff depends on the low carbon technologies you own (i.e. EVs, heat pumps, solar or battery storage) and your energy use. See what generally works best for some common combos by doing our quick quiz.

Octopus Tracker directly tracks wholesale energy prices and has two key features: The rates that you pay change every day. The unit rates for gas and electricity change daily, based on the latest wholesale prices (these are what firms pay for energy), and are updated at midnight each night.

Two of the biggest energy suppliers currently are Octopus Energy and E.ON Next. In this article, we will compare the two, looking at which one is better in terms of tariffs, prices, customer service, and reviews.

Octopus Energy is an energy provider that supplies renewable energy. Established in 2016 and part of the wider Octopus Group of companies, they are the largest investor in the UK solar industry.

E.ON next advertise heavily that 100% of the electricity they generate is from renewable sources. This means that the electricity their customers use is sourced from their own renewable energy generation plants, supply agreements with independent renewable energy wind and solar plants, and purchase renewable electricity certificates.

On their website, E.ON Next states that they generate enough electricity at their biomass plant to supply 100,000 homes across the UK. While green gas is not mentioned at all on the one tariff on offer, we understand that E.ON Next has invested in green gas certificates for their greenest tariffs (not currently on offer).

Just like E.ON Next, Octopus put their green energy credentials at the forefront of its offering. They offer 100% renewable electricity on all tariffs as standard. Much of this they generate at their own plants, and they invest heavily in the production of renewable electricity and green gas from biomass plants.
