

Off-grid systems montevideo

Off-grid systems montevideo

Establecida en Uruguay, nuestra empresa es l?der en las propuestas de energ?a renovable. Apuntando no s?lo a la venta de insumos, sino tambi?n a la atenci?n personalizada y asesoramiento adaptado a cada necesidad.

Estos equipamientos se dise?an en funci?n de los consumos solicitados por el cliente. El almacenamiento y el consumo de energ?a, se administran a trav?s de bancos de bater?as.

With nary a neighbor in sight, the Retreat in Finca Aguy occupies an enviable plot among the low eastern mountains in Pueblo Eden. MAPA Architects designed the modern home for a well-traveled family who wanted a minimal retreat that embraced the unique Uruguayan landscape. In keeping with the clients' desire for a low-impact home, the abode was constructed in a Montevideo factory 200 kilometers away and equipped with off-grid technologies including solar panels and an on-site waste treatment system.

Trucked to the site in two parts, the home was set atop two locally crafted stone walls built on-site. Multiple site visits were made to determine the optimal site placement that prioritized views and solar orientation.

"Its abstract shape contrasts with the sinuous landscapes in which it is located," explains MAPA Architects. "We like the notion of an intentional contrast between nature and artifice."

"How to work in the best possible way within remote landscapes is a question that always guides us," says MAPA Architects. "We believe that Retreat in Finca Aguy is one of the possible answers, which combines landscape and industry in a manner they both benefit from each other."
