

Overvoltage pv systems

By buying in bulk directly from our suppliers, and with over ?2m of solar products held in stock, you benefit from the lowest possible prices. Our extensive stocks also ensure that when your installation is booked, you can be confident there won't be any last minute delays due to stock shortages or supply chain disruption.

Our friendly team of Solar Experts are here to answer all your questions and recommend the best PV Solar Solution for your home. They'll give you a range of options to choose from, and a free no-obligation quote.

We guarantee to supply and install your new solar energy system at the lowest possible price, and we'll beat any like-for-like quote from another National Supplier by at least ?100. Giving you complete peace of mind that you are getting a really great deal.

Glow Green are very professional, accessible and competitively priced company. They took us step by step through the process from start to finish. The installers completed the installation in one day and were very efficient, cracked on, tidied up, left no mess and kept us informed at all times with what was happening. It was a smooth professional process from start to finish. The panels are already saving and earning us money. Would highly recommend. Close

From sale to installation was a straightforward process and a very competitive price for 6 x panels, inverter and battery. My sales/customer service agent Carl was tremendously helpful throughout the process. Christian, the installer and his team were professional and efficient, working really well as a team and thoroughly explained the operation of my system, as well as arranging two weeks of beautiful ?? so I can reap the rewards of my investment.? I would recommend this company.

We've had our solar panels now for 6 months and have been very happy with everything right from the off. Communications, promises delivered, install.....all excellent. Since then, we've been smugly watching the electricity our panels have generated, using it in the household, and exporting to the gridthen we were forced to change our broadband routerwe were still generating just fine but could no longer get on the App to see what was happening ...

A telephone call to Glowgreen had us speaking with Richard Hughes in the tech dept, who patiently walked us through the procedure to connect Solis with our new broadband routerresulting in instant connection. He even took the time to remotely check out our system and recommended a few small "tweaks" to make sure it's running efficiently. Overall a very positive experience and it's left us feeling very happy to continue to recommend Glowgreen. Close

Really positive experience with Matthew Graham from the Design Team, good telephone support throughout the booking and the Electrician/Fitters Billy and Danny are true experts in their field. The setup seems to be

Overvoltage pv systems

outperforming the estimates, I really cant fault the service. Even the scaffolding company were 1st Class. Special Thanks again to Billy & Danny who went above and beyond. Thank You!!

The sales team were very knowledgable and could answer all my questions, unlike other companies I contacted. The installation team listened to me, could answer all my questions. They were efficient, polite and did a great job. They gave me a walkthrough of my system and App before I left. Glow Green then contacted me to check everything was to my liking and let me know that I could go through them if I have any issues or concerns. A great company.

Calculating potential savings with solar panels involves understanding your current energy usage, the capacity of the system you're considering, and the initial costs (perhaps including a battery) versus long-term benefits. Here's a quick look at potential savings based on the size of your house size.

Glow Green are one of the UK's leading suppliers of Green Energy, with a reputation for great value and outstanding service. When it comes to fitting a Solar Energy Solution, we'll help you make the right choices, answer all your questions, and install your new solar roof on time and on budget.

One of the first things most customers want to understand is whether they need to include a battery. In most cases this is the right thing to do, as you can see by comparing the benefits of each option below. If you decide to proceed, we'll help you choose the most cost-effective battery option, to reduce your payback period, and maximise your savings,
