

Panasonic 360 watt solar panel

Panasonic 360 watt solar panel

Panasonic 360W EverVolt is a great panel for residential or commercial systems. Panasonic solar panels show low degradation rates, better shading tolerance and backed up by strong 25-year warranties.

Japanese engineers always implement the latest solar innovations into their product. Half-cut cells of EverVolt improve conversion efficiency and minimize power losses. N-type cells lower degradation level and increase the longevity of the Panasonic 360W module.

Panasonic panels lose around 2% of their power output in the first year, but after that the degradation rate is only at 0.25%, which is one of the best rates in the industry. You are guaranteed to have at least 92% by the year 25, according to the Panasonic 360W spec sheet.

Panasonic offers a 25 year warranty for performance, products, parts and labor. Whether it's the first year or two decades have passed, you can be sure that the company experts are there for you. The company has offices all around the world and getting customer support for your Panasonic EVPV360 should be relatively easy.

The EverVolt 360W model reaches 20.6% efficiency, much higher than conventional modules. Improved conversion rate allows you to get more energy out of a square foot with a Panasonic 360W solar panel.
