One of the biggest expenses utilities face is their monthly power demand. SurvalentONE Dynamic Voltage Regulation (DVR) can help you reduce peak demand, prevent brownouts, conserve energy, achieve cost-savings, keep voltages within an optimal range, and maintain overall system power quality. SurvalentONE DVR takes the guesswork out of lowering peak demand because it continuously monitors field devices, sensors, and AMI meters, thus ensuring that the right balance is struck between demand reduction and end-of-line voltages.

High energy bill? Many utility companies charge higher rates when there's more demand during peak hours. These times typically range from 1:00 pm to 7:00 pm--exactly when energy-intensive appliances are being used the most. Peak shaving, leveling out peak electricity use, is a proven strategy to reduce such charges.

Just ask Texans what happened in the winter of 2021. Extreme peak pricing during winter months raised customers' bills with variable-rate plans from \$0.03-\$0.08 per kilowatt-hour to a whopping \$9/kWh.

Several peak shaving methods will get the job done, but not without major drawbacks. The most reliable way to peak shave is to utilize hybrid supercapacitors as your in-home energy storage solution. These systems are clean, quiet, safe and require no active management to operate. It simply works in the background while saving money.

According to the NREAL and Clean Energy Group, solar + storage make economic sense for millions of customers globally. Energy storage systems charge during off-peak hours then discharge to avoid paying peak prices during the most expensive times of the day. An emerging leader in the solar energy storage space comes from PowerForma.
