

Photovoltaic pv systems bratislava

Your trusted partner in solar energy solutions! Nestled in the heart of Bratislava, Slovakia, at Ivansk? cesta 5740/16, our company is dedicated to harnessing the power of the sun to create sustainable and efficient energy solutions for a brighter and greener future.

We view our clients as more than just customers; they are our business partners. Beyond supplying products, we offer expert consultation and deliver tailored solutions to meet their needs. Begin your project with us today!

We provide comprehensive services in the field of assembly of PV power plants for industry, manufacturing companies and halls, storage areas, apartment units and family houses. The portfolio of our services includes servicing of PV power plants, engineering activities, development of project documentation, performance of photovoltaic power plants, or own production of mounting systems.

The main goal in the implementation of the Energy Monitoring System (EMS) is the creation of a centralized tool offering data collection, processing and reporting functions...

This 46 kW photovoltaic system was installed by our client Power Service in Bratislava (Slovakia) on a gravel-covered roof. Thanks to Sun Ballast's innovative mounting system, both the design and installation were completed easily and efficiently. Our concrete support structure eliminates the need for roof penetration, ensuring the building coverage remains intact.

The bushings for panel fixation are pre-installed, and the metal core-reinforced concrete blocks arrive pre-assembled, requiring no additional mounting effort. For this photovoltaic plant, the Single-Row 30? system was used, offering a versatile solution with adjustable row lengths and spacing to optimize shading and maximize space usage. This system ensures optimized weight distribution and roof load management, making it ideal for installations on flat roofs with obstacles such as gravel, green roofs, or industrial building membranes.
