

Plug-in electric vehicles phevs moldova

At the end of 2022, about 700 electric cars were registered in the Republic of Moldova, which represents a double increase compared to 2021, when 355 electric cars were registered.

"With the development of the infrastructure, the number of electric cars registered in Moldova has grown explosively. In the last five years, the increase is 20 times from 99 to almost 2,000 electric vehicles, according to the data of the Agency for Energy Efficiency. The number of electric and hybrid cars exceeded 27,500 at the end of last year", said the Moldovan Minister of Energy, Victor Parlicov.

The first expedition of environmentally friendly cars started today in the Republic of Moldova. Nine electric, plug-in and hybrid cars will roam Moldova for 5 days to promote innovation in auto transport industry and demonstrate the performance of zero-emission cars.

"The eco mobility can be a reality for Moldova. We promote environment-friendly transport to reduce air pollution. 14% of the total volume of greenhouse gas emissions in our country is in the transport sector," says Alexandru Rotaru, project manager at UNDP Moldova, organization that partnered for the electric car marathon.

9 brand and varied car models will roam Moldova for 5 days. The convoy of cars will cross the cities of Orhei, Soroca, Drochia, Balti, Ungheni. The vehicles will be charged with power supply at the overnight hotels and restaurants. The cars participating in the expedition will return to Chisinau on the 3rd of November at Piata Marii Adunari Nationale (at 13:00 - tentative hour). On this day, expedition's participants will share with people their impressions and experience of driving ecofriendly cars.

Currently, in the Republic of Moldova, there are registered 54 electric cars and 5 charging stations, all in Chisinau. In 2019, 14 new electric vehicle charging stations will be installed on the main urban routes of the Republic of Moldova. The investment is being made thanks to a partnership between the Energy Efficiency Fund and the United Nations Development Programme within the Sustainable Green Cities Project.

The Sustainable Green Cities Project, with a five-year duration: 2018-2022, has a total budget of \$ 2.6 million provided by the Global Environment Facility (GEF) and co-funded by UNDP with \$ 80,000.
