

Port moresby battery recycling

Port moresby battery recycling

Founded in October 2000, this nationally owned company has risen in the collection, processing, and export of scrap metals and other recyclable materials, setting new benchmarks for environmental stewardship and economic advancement.

Aligning with PNG's national goals and directive principles, Branis Recycling Limited emphasises sustainable environmental management, equal participation, human resource development, employment opportunities, economic and social development, and nurturing an export-driven economy.

Unlike any other recycling company that operated within PNG, Branis is committed to conducting its operations in an eco-friendly manner to ensure that future generations can meet their needs without compromise.

Its mission involves partnering with corporate industries and government bodies to help them achieve their sustainability goals, cleaning the environment of industrial waste, creating employment, contributing to national economic growth, and maintaining safety across all operations.

Branis Recycling Limited offers a broad range of services including the collection and buying of all scrap and metal waste materials, such as used beverage cans, mixed non-ferrous metals, used plastic beverage bottles, used lead-acid batteries (ULABs), and electronic and ICT wastes (E-Wastes).
