Transparency is how we protect the integrity of our work and keepempowering investors to achieve their goals and dreams. And we haveunwavering standards for how we keep that integrity intact, from ourresearch and data to our policies on content and your personal data.

We sell different types of products and services to both investment professionalsand individual investors. These products and services are usually sold throughlicense agreements or subscriptions. Our investment management business generatesasset-based fees, which are calculated as a percentage of assets under management.We also sell both admissions and sponsorship packages for our investment conferencesand advertising on our websites and newsletters.

Maintaining independence and editorial freedom is essential to our mission ofempowering investor success. We provide a platform for our authors to report oninvestments fairly, accurately, and from the investor"s point of view. We alsorespect individual opinions--they represent the unvarnished thinking of our peopleand exacting analysis of our research processes. Our authors can publish views thatwe may or may not agree with, but they show their work, distinguish facts fromopinions, and make sure their analysis is clear and in no way misleading or deceptive.

To further protect the integrity of our editorial content, we keep a strict separationbetween our sales teams and authors to remove any pressure or influence on our analysesand research.

The investment follows more than three years of collaboration between Iberdrola and RTS, focusing on developing solutions using cork, hollow ceramic microspheres and aerogel.

RTS, an Andalusian company founded in 2015, has established itself as a leader in thermal insulation manufacturing. The company is currently developing and approving products applicable to Iberdrola's offshore wind and Smart Clima businesses.

Based in Utrera, Seville, Spain, RTS joins Iberdrola's Perseo portfolio which has invested more than EUR200m since 2008, focusing on innovative technologies and business models that promote sustainability.

In a similar development, Iberdrola, through its UK network subsidiary ScottishPower Energy Networks, has received authorisation from the UK regulator for the Eastern Green Link 1 project.

The project, representing a EUR3bn (\$1.95bn) investment, involves installing a submarine cable connecting Scotland and England, enabling clean electricity transmission for two million UK homes.

The project will involve the installation of a 196km high-voltage, bi-directional subsea electricity cable

between Torness in East Lothian, Scotland and Hawthorn Pit in County Durham.

MSE International has won funding from TRIG 2024 to lead a new project, PRIMET; Port Recharging Infrastructure for Maritime Energy Transition. The project will accelerate the roll-out of port and harbour infrastructure needed to support the rapid expansion in vessel recharging and shore-powering facilities which are essential to realise the government's Clean Maritime Plan. PRIMET… Read more »

SMST has been awarded a contract by shipbuilder Green Yard Kleven for the delivery of a gangway (TAB-L2), with an Access and Cargo Tower (ACT), and a 50t Knuckle Boom Crane (KBC) for the newbuild Field Support Vessel (FSV) of OMV Petrom S.A. The vessel is bound for the Neptun Deep project, the largest natural… Read more »
