## Price of solar bulbs in ghana

LED solar sensor wall light with 4 sided illuminating panels, IP44 makes it ideal for outdoor use, Intense sunlight can be converted into solar energy efficiently. Use where light is required, such as paths, garages, backyards. etc. In these areas, place the lamp where it is easily exposed to sunlight.

Cost of running this Energy saving PLS Lamp Annual ₵5.10, You can save & ₵20.44 per year based on 4 hours use per day in place of the standard traditional Bulb (cost based on 14p per unit) & life time saving of ₵112.00

Drape these lightbulbs around your garden to accent flowerbeds, ornaments or simply add some ambient lighting to your garden decor. These Eureka bulbs are placed along a 3.8 metre string that makes placing them strategically in your garden or along your conservatory easy-peasy. There are no other wires needed for these lights, or any kind of operational costs. Each bulb comes fitted with 3 LEDs and is able to produce light via solar power, negating the need for any external power source. Give your garden some flair the eco-friendly way with these Eureka Lightbulb String Lights

Smart Garden is a UK based company which specialises in harnessing the power of the sun. Their range of innovative solar products vary in design from the traditional and the classic, to the colourful and contemporary. The use of renewable energy as an ideal way for the environmentally conscious to enhance homes and gardens is always a priority for Smart Garden. To top it all off, not only do these Smart Garden lights and water decorations look great, but as solar energy does not diminish our planet's precious resources, they can be used and enjoyed with a clear conscience.

A splash of colour for your garden and outdoor spaces, hang classic colourful bulbs in trees, from trellises, pergolas and more for stylish accent lighting. A pack of four colourful plastic bulbs; yellow, blue, green and pink, each bulb is lit with a string of firefly string lights for an enchanting fairy lit effect. Solar powered, each bulb has it's own integral solar panel, and so there's no need for wiring, and there's complete freedom of placement. Simply allow to charge throughout the day, and they'll sense darkness to automatically switch on at night.
