

Rack mount chassis for gaming pc

Rack mount chassis for gaming pc

INFINITUM Studio 4U features our distinguished hardware configurations in a rack-mountable chassis designed for standard server racks. The clean-looking, 2mm thick hand-brushed aluminum front panel elegantly hides optical drives and HDD hot-swap bays while allowing for excellent front-rear airflow, boasting a no-compromise setup with Intel i9/AMD Ryzen 9 CPUs and a GeForce RTX 4090 graphics card for 8K gaming and MadVR scaling.

STEIGER DYNAMICS systems are assembled with unparalleled attention to detail and feature premium build quality in all aspects. Thorough cable management ensures that the interior of every system is optimized for maximum durability, clean aesthetics and unobstructed airflow.

HTPCs are computers designed to tackle all of the challenges of home entertainment in one elegant package. Whether the centerpiece of a home theater or doing the heavy lifting behind the scenes as a media server, these hybrid systems represent a whole new generation of PCs - blurring the line between enthusiast desktop PCs, gaming consoles, and home entertainment devices.

INFINITUM Studio 4U is a fully air cooled system available with a premium extra-large, dual 120mm, heatpipe CPU cooler. A 120mm exhaust fan and 140/120mm intake fans create positive pressure inside the case and efficiently cool all core components.

Building quiet computers is our obsession. All our cooling components are carefully selected for their durability, efficiency and noise levels. Each fan is hand-tuned with a variable RPM curve to ensure maximum quietness at all load levels. We guarantee that every STEIGER DYNAMICS system is virtually inaudible during regular usage. We achieve this by employing highly efficient air or liquid cooling, anti-vibration materials, acoustic insulation, and custom BIOS/firmware settings to ensure minimal audibility at maximum performance.

STEIGER DYNAMICS systems feature, as standard, a broad variety of connectors and backwards-compatible communication protocols. Specific connectors and capabilities vary depending on component selection.

All STEIGER DYNAMICS systems comply with standard PC specifications and are fully upgradable at any time without voiding the warranty. If you want to add another SSD or upgrade your graphics card, we are happy to help.

As a direct NVIDIA partner, we are proud to offer the latest generation of GeForce RTX-series graphics cards, powered by the NVIDIA Ada Lovelace architecture. This enables our systems to achieve resolutions up to 4K/120Hz HDR or 8K/60Hz HDR through HDMI 2.1a/DisplayPort 1.4a while utilizing cutting-edge technologies like DLSS 3, Reflex and real-time ray tracing.
