

Recycling Solar Panels in the UK

Recycling Solar Panels in the UK

Considering most solar panels have been installed within the last decade and with the average lifespan of a PV (Photovoltaic)solar panel being around 30 years, landfills are yet to fill up with this huge amount of renewable waste.

Pro tip: Avoid upsells and confusing packages--choose a provider with a clear, fixed-price quote that won't change. Heatable, a Which?-approved solar installer, offers transparent pricing with no surprises.

According to the International Renewable Energy Agency (IRENA) by 2050 16% of global electricity will be fuelled by the sun, so the necessary infrastructure to recycle is imperative.

In the European Union, The Waste Electrical and Electronic Equipment Directive (WEEE) has helped to found a members-based organization called the "PV Cycle" to help build more of this necessary infrastructure.

In the UK, similarly, solar panel companies must join a Producer Compliance Scheme (PCS), such as the government-approved PV Cycle to ensure all solar panels are recycled in the correct way.
