

Recycling batteries for sale

Recycling batteries for sale

Recycling batteries is the best way to get rid of any old batteries from your business in a way that helps you protect the environment and uphold your corporate responsibilities. At Business Waste, we can help you safely and securely recycle your used batteries in line with government legislations - from a one-off disposal to regular collections anywhere in the UK.

We work with businesses of all sizes to develop a collection plan that meets your needs. This involves providing free battery recycling bins of your chosen size and ensuring we keep the number of batteries stored on your premises to a minimum. Call us on 0800 211 8390 or contact us online for a fast quote and help with any questions you have about battery disposal.

Business Waste provides an exceptional battery collection and recycling service for companies of all sizes. We take away all types and recycle batteries where possible or dispose of them in the correct way. To make things easy, Business Waste will provide your business with a free battery collection box.

Use this to store you used batteries safely and out of the way until collection day. If you've got lots of batteries to recycle, we'll even give you a few boxes. You simply pay for the collection.

Start with a free quote for battery recycling within an hour to remove the hassle of waste management and ensure your battery waste doesn't end up as another pollutant laying in a landfill site. Call 0800 211 83 90 to speak to one of our waste experts or contact us online for a fast response.

Store your used batteries separately from the rest of your waste in a battery recycling box or bin to avoid cross-contamination. If you have different battery types, then use more than one battery bin to store them separately from each other - as they're not recycled the same way. If you've got household batteries, check if your local recycling plant has a specific section dedicated to battery disposal.

We use batteries every day to power our operations - often without realising. From running the laptops in your office to industrial size batteries that help your warehouse or factory machinery keep moving, they're indispensable for most businesses. However, like Usain Bolt in the 100m final, batteries eventually run out.

Any old batteries you can't recharge or use again due to damage that you need to get rid of class as battery waste. This could be anything from a couple of dead AA batteries that power a TV remote to big, industrial batteries keeping your warehouse machinery running.

Many people are unaware of the complexities attached to battery usage or the harmful environmental effects they can have if they're not disposed of correctly. As batteries contain dangerous materials and substances such as mercury, nickel, lead and more, used batteries are classed as hazardous waste.
