## Renewable solutions team

Integrated Renewable Solutions (IRS) is the sister company of Global Integrated Renewable Solutions (GIRS). IRS works in the U. S., while GIRS works in the rest of the world. Both companies use the same, permanent team of partner companies on all their projects.

For the first time in the renewable-energy industry, the best, most experienced firms in each sector have come together to form a permanent, integrated, American team to build renewable-energy generating facilities.

The renewable-energy field is exceptional, in that it is possible to get the finest services and the equipment that is highest-performing, most trouble-free, and longest lasting, all at a lower price than any lesser service or equipment. So compromising equipment quality makes no sense. But you do need the best manufacturers and service providers to team up on all projects, so they are able to work efficiently and produce the best results at the lowest cost.

We work closely with government and local private companies to decide what they really need and what renewable-energy solutions best meet those needs. Then, together, we fulfill those needs, including financing, development, installation, and maintenance in ways that provide the greatest economic, energy, and environmental benefits to our customers and their communities. We use as much local labor as possible and bring a host of benefits &#8211; educational, social, and economic &#8211; to the communities we work in.

Global Integrated Renewable Solutions (GIRS for short) is the world's only integrated team of companies offering the full spectrum of renewable-energy projects and services, including financing: solar, wind, geothermal, storage, and microgrids.

For the first time in the renewable-energy industry, the best, most experienced firms in each sector have come together to form a permanent, integrated, American team to build renewable-energy generating facilities. GIRS has the strong support of the U. S. government.

We work closely with governments and local private companies to decide what they really need and what renewable-energy solutions best meet those needs. Then, together, we fulfill those needs, including project installation and financing, in ways that provide the greatest economic, energy, and environmental benefits to our customers and their countries. We use as much local labor as possible, freely transfer technology to our host countries to help them achieve technical independence, and rely on their superior knowledge of local conditions.

With the help of our extensive network of renewable-energy experts, GIRS has conducted extensive research into the entire renewable industry. After carefully evaluating many companies in each sector of the industry, along with the quality of their products and services, pricing, support, warranties, honesty, and reputation, we

## Renewable solutions team

selected the best company in each sector to be our permanent partner. This team of companies works with us on every project we do. It makes IRS the first fully integrated renewable company in the world.

As part of the GIRS team, they no longer need go through expensive and usually futile competitive bidding processes. The projects are brought to them. The overall integration, coordination, and management of the projects is handled professionally by GIRS, whom they trust because of our long working and personal relationships with their senior management. The result is that our partner companies all think it's about time somebody formed a comprehensive integration company like GIRS. It's just what they've been waiting for.

As a result of this permanent partnership and its advantages, they are able to give us priority in availability and the lowest possible pricing. These low prices often make their top-quality products less expensive than the cheapest alternatives.

The solar manufacturing member of the GIRS team is Maxis. It manufactures SunPower solar modules worldwide. Since 1985, SunPower modules have been the world's premier solar panels, ranked #1 in commercial solar since 2017. Maxis's annual sales are \$2B.

Because Maxis is a member of the GIRS team, we receive their special design and engineering services, plus preferential production and pricing. Please see the presentations for our partnership with Maxis for further details.
