Replacing your iPhone battery Here s what you need to know

If your ten-year-old cousin can build a Millennium Falcon out of LEGO bricks, you can swap out your iPhone battery. Don't believe us? Watch one of our repair videos and read through a step-by-step guide first to see if you're up to the task. If you still need a confidence boost, check out these success stories submitted by users just like you.

If you need a battery replacement, your warranty probably bit the big one already. Apple's standard iPhone warranty lasts one year, and a typical battery works quite a bit longer (500 charge cycles, or roughly 18-24 months by our math teacher's reckoning).

By the way, US law states that third-party modifications or service (like battery replacements) cannot void the warranty, unless the manufacturer can demonstrate that it damaged the device. Look into Magnuson-Moss if you want to know your rights here.

Shipping smartphone batteries used to be like shipping socks, until a certain Note started catching fire and causing panic aboard airplanes. Nowadays, there are a lot of goofy restrictions when shipping li-ion batteries, with some deliveries taking as long as two months depending on the shipping carrier. In response to these issues, if your order contains a battery, we ship it via UPS Ground by default--more expensive, but much faster and more reliable in comparison.

Our battery shipments are securely packed and properly hazmat-labeled. When you buy an iPhone battery from someone offering free shipping, we can't tell you for certain if that someone is simply fibbing to the carrier to dodge the hazmat fees--but, that's probably what's happening. If you feel comfortable buying your allegedly high-quality parts there, hey, don't let us stop you.

The longer answer: Check the battery replacement guide for your iPhone to get an idea of what's involved. An iPhone 4S battery can be swapped out by almost anyone in about 10 minutes, while an iPhone 7 can take an hour or more if you go whole-hog and replace the waterproof adhesive liner when you're done. Other iPhone models lie somewhere in between.

UPS Ground offers guaranteed 5 business day delivery timeframes. The closer you are to California, the sooner it'll arrive. We see that batteries sent to the East Coast often take 4-5 business days to arrive.

The best way to see when your sweet new battery will arrive is to add it to your cart, go through the first stage of the checkout process and you'll be shown the expected delivery window. If you decide you want the cheaper option through USPS First-Class Mail, please keep in mind that this method is not guaranteed to arrive by an expected date and is subject to delays in transit.

Replacing your iPhone battery Here s what you need to know

Our batteries are made to the same specifications and ratings as an OEM part, but cannot be classified as "OEM" because they are not made by Apple. Apple doesn't like to sell OEM parts to anyone, so they are extremely hard to find. Our parts are brand new, fully tested, and come with an industry-leading warranty. You can learn more about our parts quality standards over here.

We've got you covered. Apple's new program pertains to specific models, but really any iPhone with a tired battery will benefit from a new one. No matter how old or new your iPhone may be, we want to help you keep it running at peak performance for years to come--we've got parts, tools, and free repair guides for every iPhone released since 2008.

Drop your question in the comments below and we'll ask our mom. If you have a question about a specific order that you've already placed, visit our Customer Support page.
