

## Sofia energy storage technologies

The European Commission (EC) and the Bulgarian government inaugurated on December 12 the National Centre of Mechatronics and Clean Technologies located at the Bulgarian Academy of Sciences, the EC said.

Thanks to the European Regional Development Fund, the Commission funded the creation of this cutting-edge facility on the Geo Milev Campus, with close to 30 million euro in support, the EC said.

The Centre will strive for scientific excellence in its research activities, such as the creation of technologies for the transformation and storage of clean energy, and methods for obtaining, purifying, and storing hydrogen.

These projects take place at an important juncture in EU policy as the EU makes the transition to a net-zero economy with a focus on home-grown renewables and increasing energy efficiency. Cohesion Policy Funds have already invested about billion euro in the SME, clean energy transition and infrastructure sectors in Bulgaria during the 2014 - 2020 programming period, the EC said.

"This inauguration also signals Bulgaria's efforts to establish itself as a leader in clean technologies, supporting young researchers & businesses, and strengthening relations with science and business communities," the statement said.

The Sofia Globe team can testify that upholding the globe is reminiscent of the work of Atlas. Please support us in continuing to offer - as we set out to do when we launched in June 2012 - journalism that is truly independent and informed. All donations are gratefully received as we put in place our plans to grow in the years ahead.

The Sofia Globe provides news, features, insight and analysis about Bulgaria, Central and Eastern Europe and the wider world according to the high professional standards of independence and objectivity that we have set ourselves in our Editorial Charter. Read more about us.
