Several minutes before Solar Eclipse 2017 reached its peak, a band of storm clouds floated over the sun, and a collective groan of disappointment swelled among the crowd of people who'd gathered at Northern Virginia Community College's (NOVA) Annandale campus to watch the eclipse during the school's NOVA Eclipse Mania 2017 event.

Earlier in the afternoon, eclipse enthusiasts young, old and in-between, gathered in the courtyard for activities instruction on the proper use of eclipse glasses, a telescope presentation, a live feed from NASA, a demonstration of pinhole viewers and an art demonstration.

"The students are all so enthusiastic," said Vienna resident Ritu Kansal, a chemistry professor at NOVA. "So many students coming up and looking at the NASA posters. They want to learn. The whole point [of the event] is to get them excited about this huge scientific phenomenon that is happening today."

"This was an effort by the whole school, not just the science division, but also history and art," said Caporale as she pointed to colored chalk drawings of the solar system that were created jointly by the science and art divisions.

There were also outdoor meditation sessions led by NOVA's Meditation Club. "It's a symbolic of getting over the hump, the dark passing over the light and a fresh start," said Nicolette LePalme, club president and resident of Alexandria.
