Solar energy companies lobamba

To overcome these challenges, Eco Green Energy deployed a tailored solar solution featuring 237 Atlas Monofacial 540W panels, which are guaranteed to offer high energy output and reliability. We also supplied four 32kW inverters were placing them strategically to ensure the system could handle both day-to-day consumption and occasional energy surges. The system's design was optimized for 100% self-sufficiency, allowing the facility to completely meet its energy demands without relying on external sources.

Finally, we managed to complete the project on time and within budget. The end result is a solar power system that not only meets but exceeds the client's expectations, contributing to long-term energy savings and a reduced carbon footprint. We are very happy to have received our client's testimony, 2 years after the installation and their feedback is a proof of our dedication to quality and product longevity.
