Solar energy for homes amsterdam

With a shift towards sustainability and rising utility costs, many people in the Netherlands are looking for more ways to generate clean, affordable energy. It's no surprise, then, that solar panels are growing in popularity.

You'll be using electricity generated straight from your solar panels and consuming less electricity from the main energy grid, meaning you can replace part of your usual payments with a pat on the back instead.

Currently, the Dutch government is offering a sustainable energy investment grant (ISDE) to compensate for the cost of energy-saving and sustainable installations. This includes heat pumps, biomass boilers, and solar panels, of course.

The simple answer is that it will cost around EUR5000 (for six solar panels) and EUR12,000 (for 18 solar panels), including an inverter and installation, but excluding VAT. As of January 2023, you do not have to pay VAT on solar panels for your home.

However, these costs depend on all kinds of factors, like the type of solar panels, the number of panels you need for your home, whether you can get a subsidy or tax break on solar panels, and the company you choose to buy from, to name a few.

The Dutch government has all kinds of schemes to reduce the overall costs of buying and installing solar panels. With changing laws and regulations, it can be difficult to keep track of the current rules.
