Solar energy for homes tashkent

It is planned to allocate \$1 billion for the introduction of renewable energy sources in the capital of Uzbekistan, the president said. Solar panels will be installed in buildings and other facilities. The state will be guaranteed to buy surplus energy from the population and businesses.

It is planned to allocate \$1 billion for the introduction of renewable energy sources in Tashkent, Uzbek President Shavkat Mirziyoyev said at a meeting in the capital on Wednesday, his spokesman Sherzod Asadov said.

The head of state noted that the demand for electricity and natural gas is constantly growing in the city. According to him, calculations have been made to solve problems in the energy sector in the capital. First of all, it is planned to use the potential of renewable energy.

In particular, it is proposed to install solar panels with a total capacity of 2,000 MW in the city. They can cover the roofs of multi-story buildings, social facilities, buildings of government agencies and private enterprises, industrial zones, parking lots, and large water structures.

Thanks to this, according to calculations, the expected demand for energy in the amount of 240 million kWh in 2023 can be covered by more than 4 times, generating 1.08 billion kWh of energy.

According to the data announced at the meeting, 400 million kWh of energy is planned to be generated by installing solar panels in industrial zones and large enterprises, and 75 million kWh - at social facilities and government buildings.

In Namangan, solar panels with a total capacity of 58 kilowatts have been installed on the roofs of four houses, where 96 apartments are located, the press service of the Ministry of Energy reported
