

Solar energy porto novo

Solar energy porto novo

Aguas Porto Novo is a company dedicated to water management located on the island of Santo Antao in Cape Verde. To improve the supply of its facilities, Impulso Solar developed a self-consumption facility for its IDAM. The IDAM produces around 600 m³ / day of drinking water that is supplied to the population of Porto Novo.

Una manera de hacer EuropaFondo Europeo de Desarrollo RegionalImpulso SAGE has benefited from the European Regional Development Fund, which aims to promote technological development and innovation. Thanks to this funding, we have been able to add innovation to our processes, strategies, and advice for a digital marketing plan, and to promote ourselves internationally for the development of energy and water management projects. This action took place during 2021. To carry it out, we also had the support of the InnoC?maras program, from the Barcelona Chamber of Commerce.

LENTE INGENIEROS, within the framework of the ICEX Next program, has had the support of ICEX, and the co-financing of the European ERDF fund. This support aims to contribute to the international development of the company and its environment.
