Solar energy storage qatar

Qatar has been almost solely reliant on its vast gas reserves for power generation for many decades. A key pillar of the National Vision to achieve 20% non-gas energy by 2030 is energy diversification through investments in photovoltaic (PV) solar energy. Opportunities exist for U.S. companies that can supply products and services to support a ground-up photovoltaic operation.

In addition to the solar energy opportunity, are developments in power and water industries. Such business activities open numerous doors of opportunities for American companies to supply advanced products and services, technologies, renewable and alternative energy solutions, battery storage, PV cells.
