

Solar heatingwater above ground pool

Solar heatingwater above ground pool

A pool heater is a device that helps to maintain the temperature of your pool water. There are several different types of pool heaters, including solar-powered models. Solar pool heaters are a great option for those who want to heat their pool without using electricity. These types of heaters work by collecting energy from the sun and using it to heat your pool. That's why these are a great way to heat your above-ground pool without incurring the high costs of traditional gas or electric heaters.

1. Doheny's Solar Heating Systems for Above Ground Swimming PoolsThe days of having to turn on your gas or electric heat are over! Now you can enjoy a swim in the cold without worrying about how much it costs. This is because, with this solar pool heating system, all that's needed for creating warm water is sunlight reflecting off its panels. This system even works great during cloudy weather conditions as well. This allows you to add more time to your swimming season with free energy from the sun!

Review:This solar heater is a good value for the money. It reliably raises the temp of our pool by 7-10 degrees on sunny days. We did have to purchase additional tubing and attachments to make sure the solar panels can be in the sun.

With VINGLI's solar heater, you can enjoy a warm pool longer and more comfortably. This high-quality and durable solar pool heater is constructed with high-quality materials so that it won't break down in sunlight as other models do! The convenience of having an energy-efficient and cost-effective pool heating system is hard to beat! Another great aspect of this product is that you don't have any unsightly wires or pipes laying around. As it is just one simple installation process that gets rid of all concerns about power outages in your backyard.

Review:I was skeptical about the heating power of this item. It surprised me in a very good way. Easy to assemble gave me about 9 degrees in Florida weather is hot early this thing got us in the pool even sooner. Very sturdy construction good if you have dogs that can't walk all over it like some of the mat heaters.

I read several reviews before buying which made me not want to buy this product. After purchasing the product and installing it, I really have to doubt those reviews. It is an excellent product and performs exactly as stated! My pool stays around 80-85F. I have a timer on my circulation pump for 15 min on/off. I turn the pump on around 9 am when the sun hits the heater and off when the shadows fall in the afternoon, 4 pm.

Review:I bought this solar panel for an above-ground 15 ft round pool. This thing has been great! After 1 day it was keeping the pool at 82 and by day 4 the pool was up to near 90! I will say that if you want to keep that heat though, you must have a solar cover so that your heat doesn't dissipate too badly at night. The last two days, we have had very little sun and cooler temps in the low 70s, and the pool was still sitting between 80 and 82. Our pump is also less than 1hp so the water flows through it at a pretty decent rate and still warms up nicely as it goes through the coils.
