

Solar irrigation system in ghana

Solar irrigation system in ghana

Garden irrigation systems are fast becoming the must-have addition for gardens throughout the UK. Irrigation systems are automatic by design and take the leg work out of watering the garden, freeing up the time gardeners would have usually spent watering their plants. The other excellent benefit of using a garden irrigation system is its efficiency. A reduction of up to 90% can be achieved by using a drip irrigation system instead of using the traditional garden hose.

Our range of automatic watering systems is designed for gardens of all sizes. With one of the largest collections of garden watering systems in the UK, save water, time and energy with a fully automated home irrigation system. Popular for domestic and professional use, our garden watering systems are designed for both plants and gardens.

When it comes to garden irrigation systems, we have it all. We are dedicated to providing you with the very best garden irrigation equipment available. Our products are sourced from only the most reputable manufacturers, so you can be sure that you're getting quality gear every time. And because we want to make things as easy for you as possible, we offer free shipping on all orders over ?200. So why not take a look around and see what we have to offer? We guarantee that you won't be disappointed!

Easy Garden Irrigation are an established UK supplier of garden irrigation systems. Our product range includes innovative watering systems designed for optimal performance with a range of popular brands, including Hozelock and Claber. Whether you are looking for a garden irrigation system for outdoor plants, vegetables or lawn care, Easy Garden Irrigation can help.

To get you started, take a look at our Irrigation Help and Advice Page, a comprehensive walkthrough of garden irrigation systems. In the guides, you will learn everything there is to know about how simple a garden irrigation system is to set up. If you would like to ask any questions, feel free to give one of our friendly sales staff a call or drop them an email.

Drip irrigation systems are considered the most efficient method of watering gardens, delivering water precisely to the roots of plants. This is achieved by using a network of pipes that circulate water throughout the garden, connected to drip emitters placed close to the base of each plant. The slow and consistent release of water at the base of the plants helps to conserve water, reduce evaporation and runoff, and promote healthy plant growth. Additionally, it helps to maintain consistent moisture levels in the soil, which is critical for plant health.

A drip line system is a popular and time-saving method of installing a drip irrigation system for large areas. With drip line, the drip emitters are preinstalled along its length at intervals of 30-50cm, meaning you only need to lay down tubing along the length of the planting you want irrigated. Drip line systems are an ideal

Solar irrigation system in ghana

choice for hedgerows and other planted rows because they provide targeted and efficient watering directly to the roots of the plants, without the time required to install individual drip emitters for each plant.

Micro sprays deliver a fine spray of water over an area of up to 2 metres radius, making them ideal for covering small areas of plants. Because they cover small areas (rather than individual plants), micro jets and spray systems are quicker to install and can be more cost-effective compared to drip irrigation systems but are not as efficient with water. You can buy pre-assembled micro sprays on stakes with microtube, further reducing installation time, or you can buy all the components individually to customise your system as much as you'd like.

With coverage of up to 5 metres radius, mini sprinklers are great for covering large areas of plantation quickly and easily. These are similar to the micro jets and sprays, but instead of giving a fine spray, they throw water in large droplets, minimising evaporation and being carried by wind during distribution. Installation is quick and easy, with pre-made mini sprinklers on stakes available. You can also find individual components for fully customised mini sprinkler systems.

A soaker hose is a porous pipe, also known as leaky pipe, and when used, it releases water slowly along its entire length and provides a deep soaking action. It's great to use in flower borders, vegetable patches, hedgerows, or other large areas. Available in a 13mm diameter for long lengths (50m maximum lengths is recommended) and a micro 4mm diameter which is ideal for containers.

Hozelock Automatic Watering Systems are a fantastic way to quickly and easily set up a watering system in your garden with no hassle or stress. A garden watering system can reduce water usage compared to using a hose pipe (up to 90% more efficient) and can be set to automatically turn on using a water timer, perfect for when you're on holiday. The best thing about Hozelock Watering Systems is that they can be easily extended if required, ready for when your garden grows.

Each kit comes with a full set of instructions to guide you through installation, a pressure reducer, supply pipe, drip emitters, and a selection of connectors, clips and stakes to get everything joined up to your garden tap. The more advanced kits also come with a water timer.
