

Solar panel case study

Solar panel case study

We've been planning, designing, installing and maintaining solar photovoltaic (PV) systems for over a decade across the UK in a wide variety of different settings. As our case studies show, our projects include everything from residential solar panel installations, to bespoke solar PV systems for schools, commercial buildings, community projects and social enterprises.

We're passionate about solar energy (as you can probably tell) and all that it involves, so take a look at some of our solar case studies, to find out about some of our work across the UK for schools, councils, homeowners, commercial enterprises and more, with a wide variety of different building types.
