Solar panel companies in ghana

Contact Solar, awarded the Best Solar Panel Specialists in Lancashire, is committed to providing exceptional customer service. They listen to each customer's needs so they can give them the best possible advice and solar installation.

The sun is not going away anytime soon, but fossil fuels are a limited resource. To reach our goal of helping Britain achieve Net Zero, we're here to help our customers reduce their reliance on fossil fuels and lower their carbon emissions. We believe generating solar energy will help us reach this goal. By starting your solar journey, you'll be creating your own electricity from a renewable energy source, ultimately reducing your carbon footprint.

Start your solar journey today and receive a call back for a remote survey within three working days. Once the remote survey is completed, you can have your solar panel system fitted within as little as four weeks.

There's no annual maintenance or service required. You may want to give your panels an occasional rinse with a hose to get rid of any dirt or dust. You may also need to keep an eye out on nearby trees to make sure they don't shade your panels.

Solar panels create direct current (DC) energy, but we need alternating current (AC) energy for our household appliances. An inverter is used to change the energy from DC to AC. The inverter is usually installed in the loft, and is wall mounted.
