

# Solar panels for pool heating

## Solar panels for pool heating

Very easy Installation. My neighbor and I completed the installation of 7 panels in less than 2 hours. My pool is warm. When I directed the return only from and to my spa, the temp went from 78-95 in only a couple hours.

I purchased these panels to replace a 15 year old installation. The products arrived quickly (3 days), the installation instructions were crystal clear and all the pieces were of excellent condition. I must also add, it was a pleasure working with everyone at Solar Pool Supply. Everyone, especially my sales advisor Tyler, were always available to help with design questions and greatly helped with my unique installation challenges. I am not particularly "handy" with home repairs but with their help I managed to save >\$3,000 installation costs. Great.

These solar collectors are the best collector on the market today. I installed the collectors as instructed (very easy installation) and they work great. I replaced a Fafco array that I had that was NOTHING BUT TROUBLE!! They leaked constantly no matter what I did. I even took them down from the roof every year so they would survive a Michigan winter, to no avail, they would still leak in the spring. The new Swim Joy panels survived the Michigan winter with flying colors, no problems at all. Thank you for a great product.

There is basically no difference between the SwimJoy and the much more expensive Heliocol pool heating systems. Save yourself thousands and go with the SwimJoy. It is preferable to purchase the tallest panels you have room for on your roof. The taller the panel, the more efficient the heating process.

Great solar panels, we bought 3! Heats our inground pool to 85-90 degrees in Michigan.! Solar Pool Supply has been so great to work with, their customer service is outstanding! Highly recommend!

The SwimLux panels are amazing. We have had them up and running for about 2 months and even with the colder Northern California weather in the high 60's and low 70's we are able to get our 26,000, gallon, 620 sq ft pool to 84 degrees. This is with just 240 sq ft of SwimLux Semi Glazed panels. When temperatures get into the high 70's the pool hits temperature by midday and I switch to heating the spa with the panels. They are amazing! Thanks for selling an awesome product, it has eliminated our usage of the gas heater and saved us tons on our energy bills.

Excellent company to work with. I was replacing some 15 year old panels that had been springing leaks for several years. The solar panels were well packaged and of high quality. They were very easy to install. One of my panels was leaking, it looked like it had a small cut in it, but they replaced it immediately, no questions asked. I can't say enough how great the customer service is, and the price was good too.

As you can see from the photo, these new panels fit perfectly as replacements for my original solar panels. I

found the retrofit to be easy and I actually did it as a one-person installation. I did get some help to get them on the roof. The quality is excellent and the fit is perfect. I have contacted customer service twice and they have replied quickly and professionally. I highly recommend Solar Pool Supply for your needs.

This is a photo taken after completion of my project. The gentleman at Solar Supply were VERY helpful and very knowledgeable about their products. They supported me thru the complete process. Everything is working 100% and my pool water is 85 degrees. I really can't express what a great company this is to deal with.

Found Solar Pool Supplies on internet. They're in San Diego, I'm in Virginia. Found Matt to be very knowledgeable and trustworthy. Purchased panels, and installed. Found Matt and other staff to be very patient with all my questions. Installation went as promised. This has been one of the coolest springs on record. Looking forward to getting the most of solar's benefits. Thanks Solar Pool Supply, customer support was excellent!
