

Solar storage solomon islands

Solar storage solomon islands

This effort will help meet Tonga's goal of 70% renewable energy by constructing a new 33kV electricity network for solar power transmission and upgrading parts of the existing grid.

Scott Morris, ADB's vice president for East and Southeast Asia and the Pacific, said these projects will "significantly reduce the Solomon Islands and Tonga's reliance on fossil fuels" while improving disaster resilience.

He added, "These transformational energy projects demonstrate ADB's steadfast commitment to improving energy security, affordability, access, and sustainability across the Pacific."

Australia also announced an \$80m investment package to support renewable energy in the Pacific, focusing on off-grid and community-scale solar projects through programs like REnew Pacific and the Australia-Pacific Partnership for Energy Transition.
