

Solar water heater for sale in ghana site jiji com gh

Solar water heater for sale in ghana site jiji com gh

• High performance Solar water heater • Green energy with zero carbon emission • Uses very efficient evacuated tube collectors for maximum performance • Can heat water in overcast conditions • Can operate in temperatures as low as -40F • Each evacuated tube is similar to a thermos in principle; preventing heat loss

21o absorbing angle, 758 x 1800mm vacuum tube, 200L water tank capacity, 52.5mm water tank insulation depth, 520mm water tank outer diameter, 415mm water tank inner diameter

THERMOSIPHON SYSTEMS Chromagen's Thermosiphon solar heating system delivers high efficiency and low-maintenance. The system provides hot water after only a few hours of sunlight. This is the eco-friendly answer to a family's hot water needs. This streamlined system uses natural water circulation and doesn't require a pump or control unit. It includes a solar collector and a storage tank. All Chromagen systems are supplied complete with connection fittings.

FORCED CIRCULATION SYSTEMS Forced circulation systems use electrical pumps, valves, and controllers to circulate water or other heat-transfer fluids through the collectors. This enables a high degree of flexibility in the positioning of the system components. For example, the tank can be installed in a basement. In addition, the system can operate with a series of collectors to supply heated water to several large tanks, making it suitable for hotels, swimming pools and other commercial applications.
