

Solarprofi Schmidt GmbH

Welcome to UPS Solar! We install solar panels and battery storage solutions nationwide. With teams located across the country, we bring a local touch to every project, ensuring you receive personalised service no matter where you're located.

We install solar panels and battery storage solutions nationwide to help you safeguard against rising energy prices. Our range of solar storage solutions ensure you have the power you need, when you need it.

The new modules are built with M10 wafer (182 mm) half-cells. 10 busbar technology using round ribbons increases the power gain from each cell and makes them less sensitive to microcracks, offering higher module reliability.

The ECS is a high-performance, scalable battery storage system. The modular design allows for maximum flexibility, making it suitable for a broad range of storage applications. Additional batteries can be installed in series. Installation is easy, with a plug and play solution that can save valuable time for installers.

We provide an interactive service that allows us to E-Mail you a free bespoke quotation in 3 simple steps. We will measure your roof, determine the maximum domestic size system applicably and calculate your return on investment, we'll then send a tailored fully inclusive Solar PV panel installation quotation.

Refreshingly, we do not employ any sales reps or "Surveyors" as we do as much as possible remotely. We find your property online and measure the roof from our office. From there we will provide a detailed proposal which will explain all about the solar panels we use, the inverter, how many panels we can install and of course the potential returns and savings with a firm installation price.
