Solaruk Ltd reviews

If you've got a Tesco Clubcard, check if you have any vouchers close to expiring, as ?18 million-worth are due to run out on Saturday 30 November. Don't want to spend your vouchers yet? We've got a trick to extend their validity.

Homeowners will have to wait even longer for major leasehold reform after the Government described the previous attempt at overhauling the sector as "flawed". Here's what you need to know.

NS& I will cut its Premium Bond prize-fund rate to 4% from 4.15% for the January 2025 draw and beyond. But this rate was already lagging behind interest rates on standard savings accounts - so if you're a bondholder, you may want to consider moving your cash to an interest-paying account.

NatWest is the latest major lender to reduce the amount of time its mortgage customers have to lock in a new rate ahead of their current deal ending, joining five other high street banks. The changes mean you've less time to insure yourself against rates rising before your existing mortgage comes to an end.

A charity has launched legal proceedings against the UK Government, aiming to reverse its decision to restrict Winter Fuel Payments to those on certain benefits. It's still very early days and there are no guarantees, but here's what you need to know.

Project Solar's catalogue currently contains its Evo Super Max 480 panels and integrated solar roof panels. Integrated solar roof panels, also called solar roof tiles or in-roof tiles, are applied directly to the roof battens, lying flush with the roof profile. This eliminates the need for mounting frames. This innovative system has helped Project Solar win several industry awards, giving them a solid reputation in the solar sector.

Project Solar is well-established in the renewable energy sector, carrying out over 45,000 solar installations, preventing the release of 150,000 tonnes of carbon. It's accredited by the Home Insulation & Energy Systems Quality Assured Contractors Scheme (HIES), the Energy Performance Validation Scheme (EPVS), the National Association of Professional Inspectors and Testers (NAPIT), and the Microgeneration Certification Scheme (MCS).

Positioned in the heart of the Midlands, with another office in the Northwest, Project Solar caters to homeowners across the UK. It offers products from solar panels and roof tiles to electric vehicle chargers, infrared heaters, and intuitive heating controls.

It also won European/UK Inverter Installer of the Year from Growatt, Company of the Year at the Derby Telegraph Business Awards 2018, and is the exclusive installer of the Duracell Home Energy Bank solar battery. However, in 2022, Solar Power Portal reported that Project Solar was under investigation by trade

bodies the MCS and NAPIT over the integrity of its mounting equipment. Our research suggests that formal proceedings have yet to be issued.

Project Solar ranks among the pricier manufacturers, with solar panel costs starting at ?350. However, the company generally provides pricing based on a complete solar panel system rather than per individual panel.

Project Solar has discontinued many of its older panels, including the Evolution Elite 400, focusing instead on its Evolution Super Max 480W and roof-integrated solar panels. Project Solar's prices are higher than its competitors for similar panels, at around ?350 per panel.

Generally, to calculate the value for money of each solar panel, our experts multiplied the efficiency by the power output and divided that figure by the cost. This provides a measurable result for each solar panel. To find out more, read our article on how we review solar panels. However, due to the lack of transparency regarding the price range of Project Solar's panels, our researchers have had to exclude the cost for this calculation.
