Southend Smart Repairs

Our repairers need space for their van (at least 3ft on either side of the car) and access to electricity to be able to carry out the work. If you don't have access to an electrical outlet, please let us know and we'll arrange to send a repairer fitted with a generator (please be mindful of the fact that not all repairers carry them so this is subject to where you are).

During the car scratch repair process, an accurate colour match is obtained using a Spectrophotometer, matching the manufacturer's finish. We can then replicate the colour with our specialist range of tints. So, whether you need one car wheel arch scratch removed, or multiple bumper scuffs repaired, the work can be undertaken in a relatively short amount of time, restoring your car paintwork to a high quality.

PDR is a type of car repair that removes minor dents where the paintwork is not damaged. It involves accessing the back of the damaged panel and using special tools to "massage" out the dent. We do not carry out these types of repairs as we cannot guarantee the quality of the repair.

We don't provide a pricing grid, however, for bumper scuffs / scrapes you are likely to pay between ?130 and ?180 depending on damage and location. Panel damage will typically range between ?160 and ?230 depending on location and severity.
