

Sunforce 600 watt wind turbine

Sunforce 600 watt wind turbine

The included Maximum Power Point Tracking (MPPT) charge controller enables the 600 watt marine turbine to achieve its highest possible performance by periodically tracking the maximum power point of the turbine's output. The MPPT can be used with battery systems of either 12v or 24v DC. The controller features a corrosion and water resistant heat sealed casing to insure longevity in the marine environment.

The MPPT charge controller is a sophisticated multi-stage battery charger that uses several regulation stages to allow fast recharging of the battery system while ensuring a long battery life.

This Sunforce 600W Marine Wind Turbine is designed for marine applications and is great for cottages, sailboats, docks, boathouses and more. Low-noise aerodynamic fiberglass blades feature a weatherproof, industrial-strength design and are designed to operate at low wind speeds, beginning operation at 4 MPH.
