A Switch boxes is a rectangular shape metal/PVC box which is used to receive light wires, power wires & on which switches can be mounted. It is used as a junction box also.

Various types of switches are used such as MS, Zinc-chromate plated metal box & PVC box. Generally, MS & Zinc-chromate metal boxes are used for concealed wiring while PVC box is used for surface wiring.

6A socket is used for low watts load such as mobile charger, computer charger, laptop charger, table lamp, TV etc. It's a 3pit socket. Two small dia bottom pins are used for phase & neutral & top big pin is used for earthing purpose.

6/16ASocket is used for both low & high watts load. It is a 5 pin socket. Top big round pin for earthing, next lower two round pins for low watts load while last two bottom pins for high watts load.

It is a device which is a part of load connected through wire & is fixed with socket. The size of plug top (suitable for 6A socket or 16A socket) depends on the load & accordingly fit with the wire of the load.

Plug tops are available in 2 pins & 3 pins. 2 pin plug top is used for low load where earthing is not required like mobile charger etc while 3 pin is used for both low & high watts load where earthing is required for protection.
