

Switzerland energy storage companies

Paderborn, 26 October 2023. The energy storage provider INTILION and Axpo, one of the largest producer of renewable energy in Switzerland, have successfully completed the first joint project. In Frauenfeld in the canton of Thurgau, the INTILION | scalecube large-scale storage unit with a total capacity of around 3.0 MWh was commissioned for the municipal utility Thurplus. The battery storage system is installed in a twelve-meter container.

Dr. Andr  Haubrock, CEO of INTILION AG says: „The growing market in Switzerland is extremely important for our company’s development. We have set ourselves the goal of taking a leading position for energy storage in the DACH region. With Axpo as main contractor, we have now successfully entered the Swiss market. Numerous other projects are already in the tendering process. We are therefore optimistic that our well-established project constellation will be followed by further orders in the future, also with larger capacities.”

„Our large battery storage makes an important contribution to the energy transition, and to the energy supply security of the city of Frauenfeld. With a growing number of decentralized power generation plants, as well as new consumers such as e-mobility and heat pumps, forecasting and grid management are becoming increasingly demanding. Battery storage systems can compensate for fluctuations in demand and power peaks in the distribution grid,” explains Peter Wieland, Managing Director of Thurplus.

INTILION will provide Thurplus with ongoing support as part of its fulfillment and service activities. With the cloud-based data management, INTILION identifies the functionality of the large-scale storage facility and each individual module at any time. Preventive maintenance measures are carried out on this basis. In addition, a hotline is available. INTILION thus offers a sophisticated combination of services, specific software and intelligent energy storage solutions.
