

Temporary power distribution rental

Temporary power distribution rental

We deliver concept-to-completion solutions, designed by temporary power specialists with access to the largest inventory of high-quality power generation and distribution equipment in North America.

From a wide range of diesel and natural gas generators to transformers, cable, light towers and more, our large rental fleet and extensive vendor network ensure we'll have the temporary power equipment that your project requires -- every time.

From our inception in 1998, we have been building our team on a foundation of excellence. Our team members' passion, expertise and commitment are what have allowed us to grow into a national company with projects across Canada.

All of our equipment is put through an in-depth quality assurance and control procedure prior to any rental. Our technicians are meticulous, work very closely with our project managers and have 100% control in ensuring that the equipment delivered is in exceptional working order.

Our vast fleet, designed specifically for applications in industrial and commercial environments, includes low and medium-voltage transformers, distribution, protection, panels, transfer switches and cable.

And our Power Broker model gives Trinity Power project managers access to the largest generator and load bank rental network in North America. Procurement is not limited by brand, inventory or rental locations.
