

Thailand increased renewable energy penetration

Thailand increased renewable energy penetration

The advancement of clean energy, in its diverse forms, is a shared global objective. However, according to the International Renewable Energy Agency's (IRENA) report Renewable Capacity Statistics 2023, Asia accounted for nearly 60% of the worldwide increase in renewable energy generating capacity in 2022, resulting in a total of 1.63 Terawatt (TW) of renewable capacity by year-end. A significant portion of this increase occurred in China. The Big Shift

Thailand is also making strides towards its goal of reducing greenhouse gas emissions by 75% by 2030. Moreover, there is a significant push by the government to implement clean energy policies, such as the National Energy Plan aims for 50% of electricity generation from clean sources by 2040.
