

Three phase inverter

Three phase inverter

The Gen4 has been designed and developed using the very latest solar technology. SolaX have pushed back the boundaries for what is possible when designing a storage inverter.

The ground-breaking SolaX X3 Hybrid 10kW G4 is an inverter that can also store surplus energy in batteries for later use. It is important to understand that this is a hybrid solar PV inverter and battery storage controller. This means it needs to be sized just like a regular inverter would be and, if it is being retrofitted, will replace the existing inverter.

Solis three phase series inverters are suitable for different PV projects with three phase input, which are also perfect models for household, industrial and commercial, as well as small & medium size distributed PV system installations. IP65 designed make it visually pleasing for domestic environment; Over 98% Max. efficiency and featuring with dual MPPT design and precise MPPT algorithm, and numerous monitoring option via RS485, WIFI and GPRS interface. All these features ensure stable and reliable operation of Solis three phase series inverter.

The Solis 40kW three-phase series string inverter adopts 4 MPPT design to provide a more flexible configuration scheme with a smaller environmental impact rate and higher generation efficiency. Whose operation is so quiet, like a whisper, thus creating a more comfortable and friendly working and living environment.

S5-GC(25-36)K-LV three-phase series string inverter adopts 4 MPPT design to provide a more flexible configuration scheme with a smaller environmental impact rate and higher generation efficiency. Whose operation is so quiet, like a whisper, thus creating a more comfortable and friendly working and living environment.
