

Titan 30 amp solar generator

Titan 30 amp solar generator

I am a 67 yr old grandma with no technical experience but I found the Titan very easy to set up and use. I have been using it (testing it) for 3 days now, plugging in various items that I might need in a power outage. The Titan has handled everything with ease. I am even able to lift the individual components by myself, so I feel confident I can move it around as necessary. Thanks!

I recently received my Titan with one extra NMC battery that I purchased through poweredportablesolar and I am very pleased with the unit. I do have a few questions about future expandability. 1) When the LiFePo4 battery packs come out, will we be able to stack them with the NMC batteries in parallel; and 2) Can I hook up a 24V 200 ah LiFePo4 battery pack to the external battery connection on the Titan even though my two stackable batteries are NMC chemistry?

I am so very happy to have made this purchase. Not only does the Titan Solar Generator have the most complete and well implemented features I could find on any similar product but the post sale support has been top notch. Multiple e-mail questions have been more than helpful and responded to very quickly.

Previously, I have added Solar to a VW Rialta using a Goal Zero 1400 lithium s 1500 watt inverter worked fine for essential RV living. Refrigerator, LCD lights, water pump, laptop and cell phone. That draw only allowed for about 12 hours of reserve. Your Solar recharge was slow because the GZ 1400 hundred only comes standard (you can purchase an MPPT add on. That brings the GZ 1400 closer to \$2000) with a PWM controller. In addition you could only charge with your solar panels in a less efficient parallel array.

By investing just a little more than \$1000 extra in a Titan, you get two MPPT controllers, the ability to attach your solar panels in a more efficient series (up to 1000 watts with a single battery) array, 2000 watts of Lithium battery, a 3000 watt Inverter that will run the big draw items like a Microwave, electric water heater, etc. etc., and many many other benefits. To be specific, my Titan with one battery (I did purchase a second battery) will run my efficient refrigerator/4L Freezer and laptop (full time internet) for 70 hours. Amazing!

Whether you are purchasing to upgrade or build an RV, or as power for your home…In my opinion, This is the best value and most efficient, beautifully designed Solar generator in the world will do it all.

When you add the fact that Point Zero, the manufacturer of the Titan, is a family owned American company that is very pleasant and helpful to work with, this is an easy purchase you can make with confidence.

My order was complete and arrived without any damage. I installed it, charged the battery and needed to call to better understand the battery meter settings and how to calibrate it. I also watched some videos on the Zero Point channel on which were very helpful. It has been a pleasure doing business with Zero Point and the

Titan 30 amp solar generator

people who work there finately 5 stars

It's nearly impossible to find a product that is engineered as well as the Titan. You can tell that Point Zero Energy thought through every detail in order to create a product that will last as well as work in a wide variety of scenarios.

If you every watched a review for a "solar generator" and thought "but can it do this", only to be disappointed by some later revealed limitation"well the Titan probably can do it!
