Source UPS is a specialist seller, installer, service and maintenance provider for uninterruptible power supplies, network racks, server room cooling, UPS batteries and associated products for applications of all sizes.

We have more than 20 years experience in the UPS industry and set up Source UPS in 2009 to provide independent pre-sales advice, UPS hardware, UPS installations and UPS maintenance to corporate end users, electrical wholesalers, channel resellers and distribution partners.

No matter how small or large your application may be we can take care of your UPS power protection and back up requirements from start to finish. With a range of services that include pre-sales UPS site surveys and UPS power audits we can help our clients plan and implement a UPS power protection policy for a new building, expansion of an existing system or design and build of entire server room solutions.

Partnering with industry leading manufacturers Source UPS is an authorised Premier Partner for APC, an Emerson Network Power Platinum Partner, Tripp Lite Critical Application Partner and Riello Power Partner. Our hardware solutions range from simple one-to-one UPS back up for a single PC or server, to large UPS systems capable of supplying server rooms, rack and cooling requirements with the redundancy and scalability required at the highest level. Source UPS was awarded SAFEcontractor accreditation in 2012 after demonstrating the highest standards of health and safety practices.

If you are concerned about your current UPS Power Protection Policy or would like our assistance in planning a new installation or server room please get in touch and have a chat with one of our sales team.

Unfortunately nobody has worked out how to make a UPS battery that lasts forever! At some point, usually every 3-4 years, you can be sure that the batteries in your UPS will need to be replaced.

A proactive approach to replacing UPS batteries at regular intervals, rather than waiting for your UPS batteries to fail is the best way to ensure availability of your UPS and minimise downtime.

Regular UPS battery testing and maintenance should be among your top priorities. Regular maintenance allows our engineers to spot signs of degradation and replace the batteries in your UPS before you start to lose battery autonomy, or before a failure occurs.
