

Ups battery replacement procedure

Ups battery replacement procedure

It was kind of tough to pop off and it will be retained at the bottom so you'll need to treat it at first like it is hinged at the bottom. Also note: there is a ribbon connected to the top but it's really long.

They are connected together and are very heavy. I stuck a flat screwdriver up under them to help get them moving. There is a connector that you can disconnect to free the batteries from the UPS. Don't pull by the wires, grab a hold of the plastic grey connector:

This battery must have been replaced already by someone because they had taped on the plastic covers over the terminals on each battery. I don't know how yours will be attached. Take off the covers:

Goofs and glitches: I didn't realize that the face plate came off so I took the outer case off and then realized I didn't need to. I wish I would have read this tutorial first ?

Much better, more informative tutorial than the video someone else made that was only a minute and a half long. No help at all with the video but your pictures and in depth descriptions/directions are the best! Now if I can find a way to save this page/content for future reference in about 2 - 3 years!! I learned NOT to bookmark stuff like this because after a few years, things get moved around, server changes, etc and I get the "not found" error.

Also, I did some major price comparisons with Amazon, Ebay and Walmart . Walmart was the cheapest at \$41.99 for a pair of new, (not refirb) RBC7 batteries, no cables/connector or fuse. The batteries appear to be fresh, not old stock. The seller is a third party seller, not affiliated with Walmart. It really pays to shop around!! Amazon was \$99 for the pair and Ebay was \$87.50 for the two.

Thank you John, for a very helpful and useful description of replacing a RBC7 battery! I get really tired of the videos that people create for tasks such as this. I think folks must make videos because it's easier than doing a good set of text (with photos) instructions. I also couldn't pull off the faceplate, but putting a flathead screwdriver lengthwise into the space at the top (between the faceplate and the body) and prying it open there worked well.

Thank you very much I was able to replace my APC Smart UPS Battery with the help of your tutorial. Really

Ups battery replacement procedure

appreciate the pictures and the clear concise write up on what to do and expect. Thanks again
